

Name: Aguado, Rheyvenchel R.
202300177
Course, Year & Section: BSIT 4-3

Student Number:
Date: August 25,2026

ONLINE ACTIVITY #1
Personalized Linux, and Git Cheat Sheet

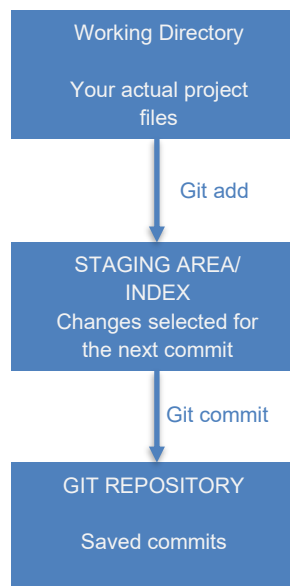

Basic Linux commands

Command	Sample Usage
pwd	pwd
ls	Ls -la
cd	cd Documents/
mkdir	mkdir my_project
rmdir	rmdir my_project
touch	touch notes.txt
cat	cat notes.txt
cp	cp notes.txt backup.txt
mv	mv notes.txt Documents/
rm	rm old_file.txt

Basic Git commands

Command	Sample Usage	Description
git init	git init	Starts a new Git project inside my current folder.
git status	git status	Shows which files are changed, saved, or not tracked yet.
git add	git add index.html	Packs your changed files so they are ready to be saved.
git commit	git commit -m "Fix login layout"	Permanently saves your packed changes to the project history.
git log	git log	Lists the history of all past saves in your project.
git diff	git diff	Shows exact line changes between your current edits and your last
git restore	git restore main.js	Throws away your unsaved edits and resets the file back to normal.
git branch	git branch feature-login	Creates or lists separate workspaces so you can test ideas safely.
git checkout / git switch	git switch feature-login	Moves you from your current workspace to a different branch.
git merge	git merge feature-login	Combines changes from another branch into your active branch.
git tag	git tag v1.0.0	Marks an important save point in history with a label, like a version number.
git clone	git clone https://github.com	Copies an existing project from the internet to my computer.

The three-tree architecture of Git
